Benchmark

H2O-64.inp was employed for benchmark as in 6.1.0. (output of grep "CP2K " *.log is used)
Ran 21 times, and average of last 20 runs is listed below.

jobtype	# of cores (# of nodes)	MPI	OMP	GPU	elapse(sec)
core	18 (1)	18	1	-	68.154
small	40 (1)	40	1	-	45.426
small	80 (2)	80	1	-	31.327
small	160 (4)	32	5	-	23.398

Notes

- GPU versions were skipped for this version; they are not so useful in RCCS for now.
  - SIRIUS GPU version might be efficient if correctly built with MAGMA etc. But skipped this time.
- We couldn't get performance improvement from libgrid (bit slower than the vanilla one).
  - pyratemp 0.3.2 was used when building libgrid.a. But this version of pyratemp cannot handle *.template files in xyz_to_vab correctly.
  - Applying sed -i -e "s/\\$/\!/g" -e "s/\@</\@\!/g" -e "s/>\@/\!\@/g" to *.template files can solve the issue, although the libgrid.a didn't bring any performance improvement...
    - (Use sed -i -e "s/\\\$/\!/g" -e "s/\@</\@\!/g" -e "s/>\@/\!\@/g" in the script; above one is valid only when manual execution on terminal.)
- libsmm is simply ignored as in the case of 6.1.0.
- This version of cp2k was built with -O2 option. We also tried "-O2 -xHost" and "-O3 -xHost", but couldn't get performance improvement.
- Released version of dbcsr was used in this build. Using master branch of dbcsr is not a good way to build reliable binary.
- QUIP test couldn't be passed in this build. So we finally remove it from the build. QUIP works fine in GCC version.
  - Patch file used when building with QUIP support. (Not used in this build; just as reference information.)

- Intel 2019 build shows lesser performance than Intel 2018 one. Also, behaviour of MPI version was bit strange and the number of failed tests was larger.
- Intel 2018 is the fastest among Intel 207, 2018, and 2019 build. In terms of test result, 2018 version is also the best. (Numbers of errors in 2017 and 2018 versions were comparable, though.)
- Modification of source code was required for Intel 2017. Some values in iso_fortran_env are not available in 2017.
    - Patch file for src/start/cp2k.F for intel 2017.
