

## Package Programs List (Molecular Science)

Last update: Mar 26, 2025.

### Compilers and Libraries

Most packages are installed under /apl.

Please check [this page](#) for Basic Biology software packages.

| name           | version                           | note   |
|----------------|-----------------------------------|--|
| GCC            | 8.5.0*                            | (system default package)   |

\*: default version

[1]: you can install packages to your home directory by using "pip3 install (package name) --user" command. Installing [miniforge](#) might be another good choice. However, the initialization of conda environment might take long time (only upon first time; this is due to the fundamental mechanism of lustre filesystem). If you need only a few packages, you should install them to your home directory via "pip3".

[2]: Compilers (such as ifort, ifx) are not installed in /apl. In case you need Intel compilers, please install Intel oneAPI Base Toolkit or HPC Toolkit into your directory.

## Application Software

The list of installed software is shown below. (Blacked out package names indicate that they have not yet been installed but will be installed.) For the manual/documentations, please visit the official website. Packages are installed under /apl directory which are accessible from both of frontend and computation nodes. See [this page](#) for detailed information about installation.

| name                      | description  |
|---------------------------|--|
| <a href="#">ABINIT-MP</a> | A software for fast Fragment-Molecular-Orbital (FMO) calculations. |
| <a href="#">AlphaFold</a> | AI program for predictions of protein structure.                   |
| <a href="#">AMBER</a>     | Package of molecular simulation programs.                          |
| <a href="#">CENSO</a>     | Program for evaluating structure ensembles at DFT level.           |

#### Note

(\*2) molpro license will be expired on Sep 15, 2025. The license will be renewed every year.

(\*3) Only non-commercial users in Japan can use this. The license will be expired in Feb, 2026. The license will be renewed every year.

(\*4) We cannot install. (Licensed users can install into their directories.)

(\*5) English guide for GRRM17 is available at <https://afir.sci.hokudai.ac.jp/documents/manual/54>. Japanese guide for this center (for GRRM14) is also available.

(\*9) We cannot install ADF and Parallel CONFLEX due to their very high license fee.

(\*17) You have to cite some papers when you publish papers with NTChem results. Please read [official page](#) and [documentation\(japanese\)](#) of NTChem.

(\*21) To use CRYSTAL, license agreement is required for each user and version. CRYSTAL17 users also need to sign a new license agreement to use CRYSTAL23. Once the agreement is arrived at RCCS, you will be able to use CRYSTAL23 or/and CRYSTAL17. ([CRYSTAL23 license agreement](#)) ([CRYSTAL17 license agreement](#))

(\*22) References listed in [this page](#) must be cited when you publish results obtained with DIRAC.
