AMBER20 update 13

ウェブページ

http://ambermd.org/

バージョン

Amber20 update 13, AmberTools 21 update 12

ビルド環境

- GCC 9.2.1 (gcc-toolset-9)
- MKL 2022.2.1
- CUDA 11.2
- OpenMPI 4.1.4 (HPC-X 2.11)
    - 実際のビルド時には OpenMPI 4.1.5 (HPC-X 2.13.1 を使用)していたが、問題が発生したため、runtime だけを HPC-X 2.11 に切り替え
    - 以下の手順では HPC-X 2.11 で記述。

ビルドに必要なファイル

- Amber20.tar.bz2
- AmberTools20.tar.bz2
    - (Amber20 update.1-13 & AmberTools20 update.1-15 & AmberTools21 update.1-12; スクリプト内で取得)
- patch-nmrat-gpu.cpp

```

# openmp tests
make test.openmp && make clean.test

# serial tests
make test.serial && make clean.test

cd ${AMBERHOME}
chmod 700 src
```

テスト

- GPU のテストについてはフロントエンドノードで実行できないため、以下のスクリプトで別途実行

```
#!/bin/sh

module purge
module load gcc-toolset/9
module load mkl/2022.2.1
module load cuda/11.2
module load openmpi/4.1.4-hpcx/gcc9

export AMBERHOME="/apl/amber/20u13"
export CUDA_HOME="/apl/cuda/11.2"

export LANG=C
export LC_ALL=C

ulimit -s unlimited

# parallel tests first
cd ${AMBERHOME}
. ${AMBERHOME}/amber.sh

## gpu tests (elsewhere)
export DO_PARALLEL="mpirun -np 2"
make test.cuda_parallel && make clean.test # DPFP
cd test; ./test_amber_cuda_parallel.sh SPFP; make clean; cd ../

unset DO_PARALLEL
make test.cuda_serial && make clean.test # DPFP
cd test; ./test_amber_cuda_serial.sh SPFP; make clean; cd ../
```

- テスト結果は /apl/amber/20u13/logs/ に有り。基本的には軽微な数値エラー。

メモ

- 前システムでのビルド時と同様に configure を利用。cmake については検討せず。
- CUDA 11.2 は configure では正式に対応されていなかったため、少し無理矢理に対応。
- HPC-X 2.13.1 では GPU での多ノード並列時にエラーが発生して計算できず。runtime を HPC-X 2.11 に切り替えることで解消。

- MMPBSA.py のパス周りに問題があり、実行に失敗。以下を MMPBSA.py, MMPBSA.py.MPI に以下の２行を強制的に加えることで解消
    - 前回のシステムではこのような問題は発生していない。

```
import sys
sys.path.append( "/apl/amber/20u13/AmberTools/src/mmpbsa_py/MMPBSA_mods" )
```
