regtest_mpi8_omp2.log:GREPME 10 15 3908 0 3933 X
```

メモ

- テストの詳細については /apl/cp2k/2023.1/regtesting/rccs/psmp 以下のディレクトリ内にある情報をご確認ください。
 - summary.txt, error_summary, timings.txt あたりが参考になるかと思います。
- 前回断念した superlu についてはコンパイラをきちんと渡すことで通過できている
- 今回は cosma を有効化。確認した範囲ではビルドに問題は無く、速度的におかしなことも起こっていない。
- GPU 版は速度が出るケースもあるものの、挙動が安定しないため今回は回避。
 - 速度が向上する条件を探るのに一手間かかる。
 - メモリ消費的にもかなり厳しい。mpirun に -mca coll_hcoll_enable 0 をつけないと動かないケースも多い。
 - toolchain 部分だけ GPU 対応した状況はそこまで不安定では無い。しかし、速度向上が微妙。速度が落ちるケースも多い。
- 以下のメッセージについては -mtune=native でビルドしているため問題は無いと思われる。
 - -march での指定のみを見ていると思われる

```
*** HINT in environment.F:884 :: The compiler target flags (generic) used ***
*** to build this binary cannot exploit all extensions of this CPU model ***
*** (x86_avx2). Consider compiler target flags as part of FCFLAGS and ***
```

- (2024/7/26) HPC-X 2.11, 2.13.1 の実行時ライブラリを使った場合 H20-256 系の 128 並列計算で速度が大幅に落ちる現象を確認。Open MPI 4.1.5, 4.1.6, HPC-X 2.16 を使えば問題は発生しない。
